

**We want to know a little  
about you....**

# Are you a(n):

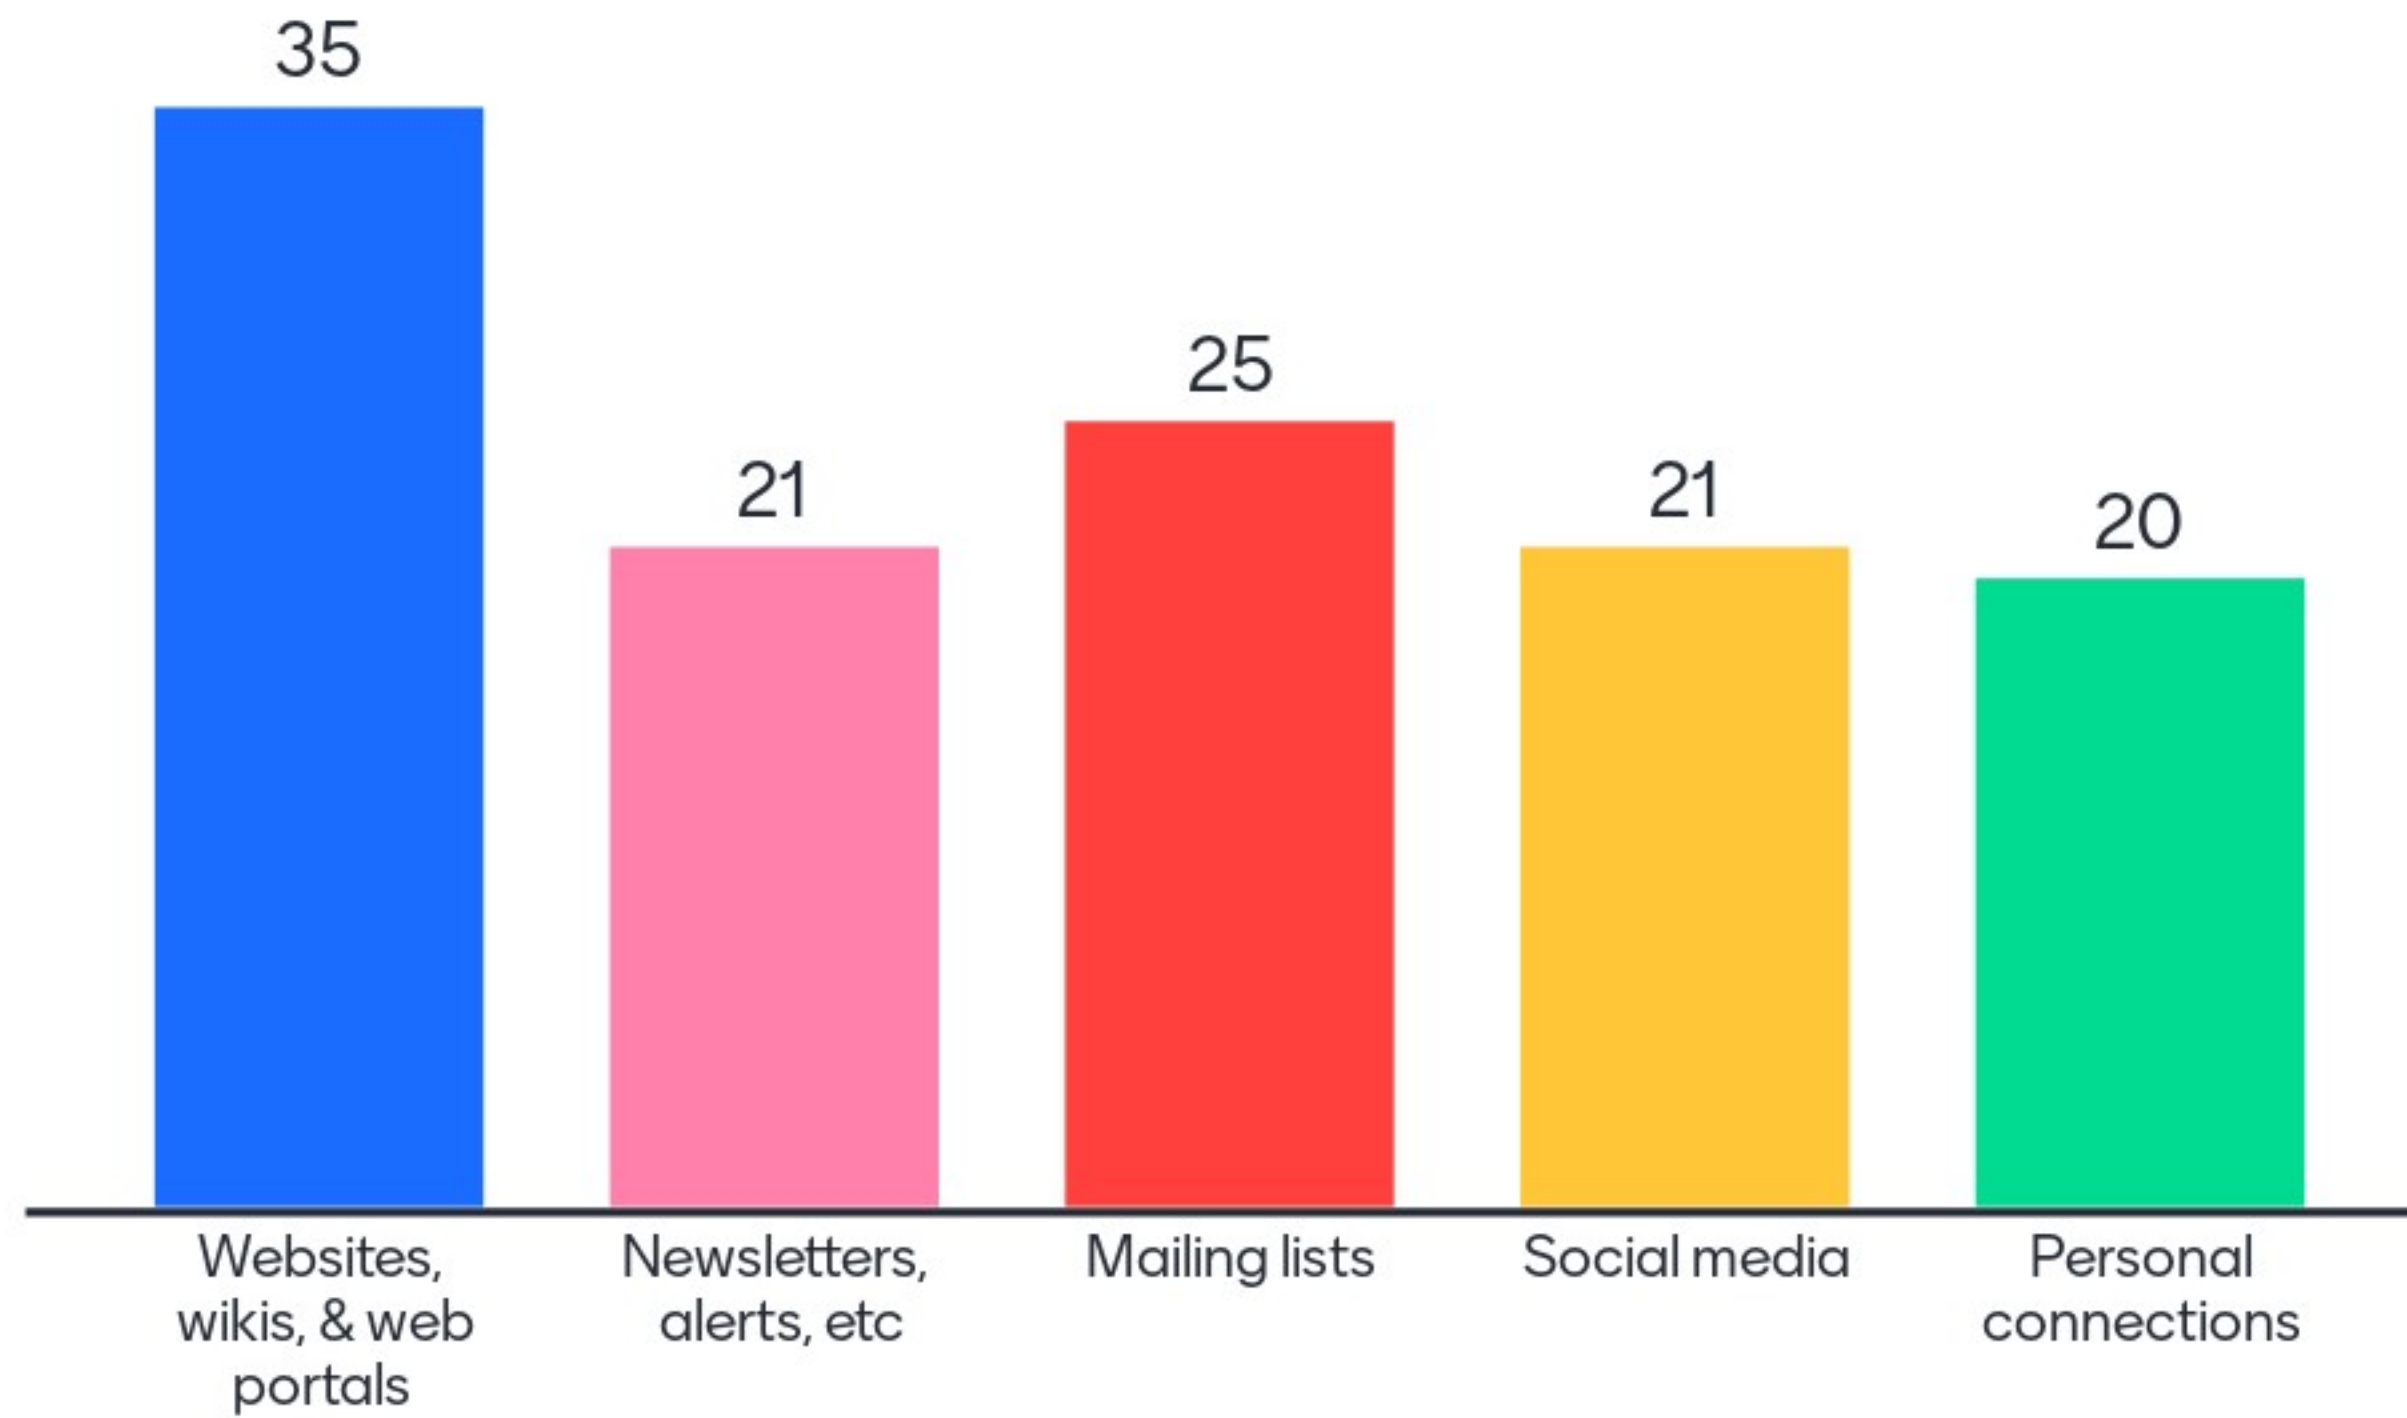

# Where do you live?

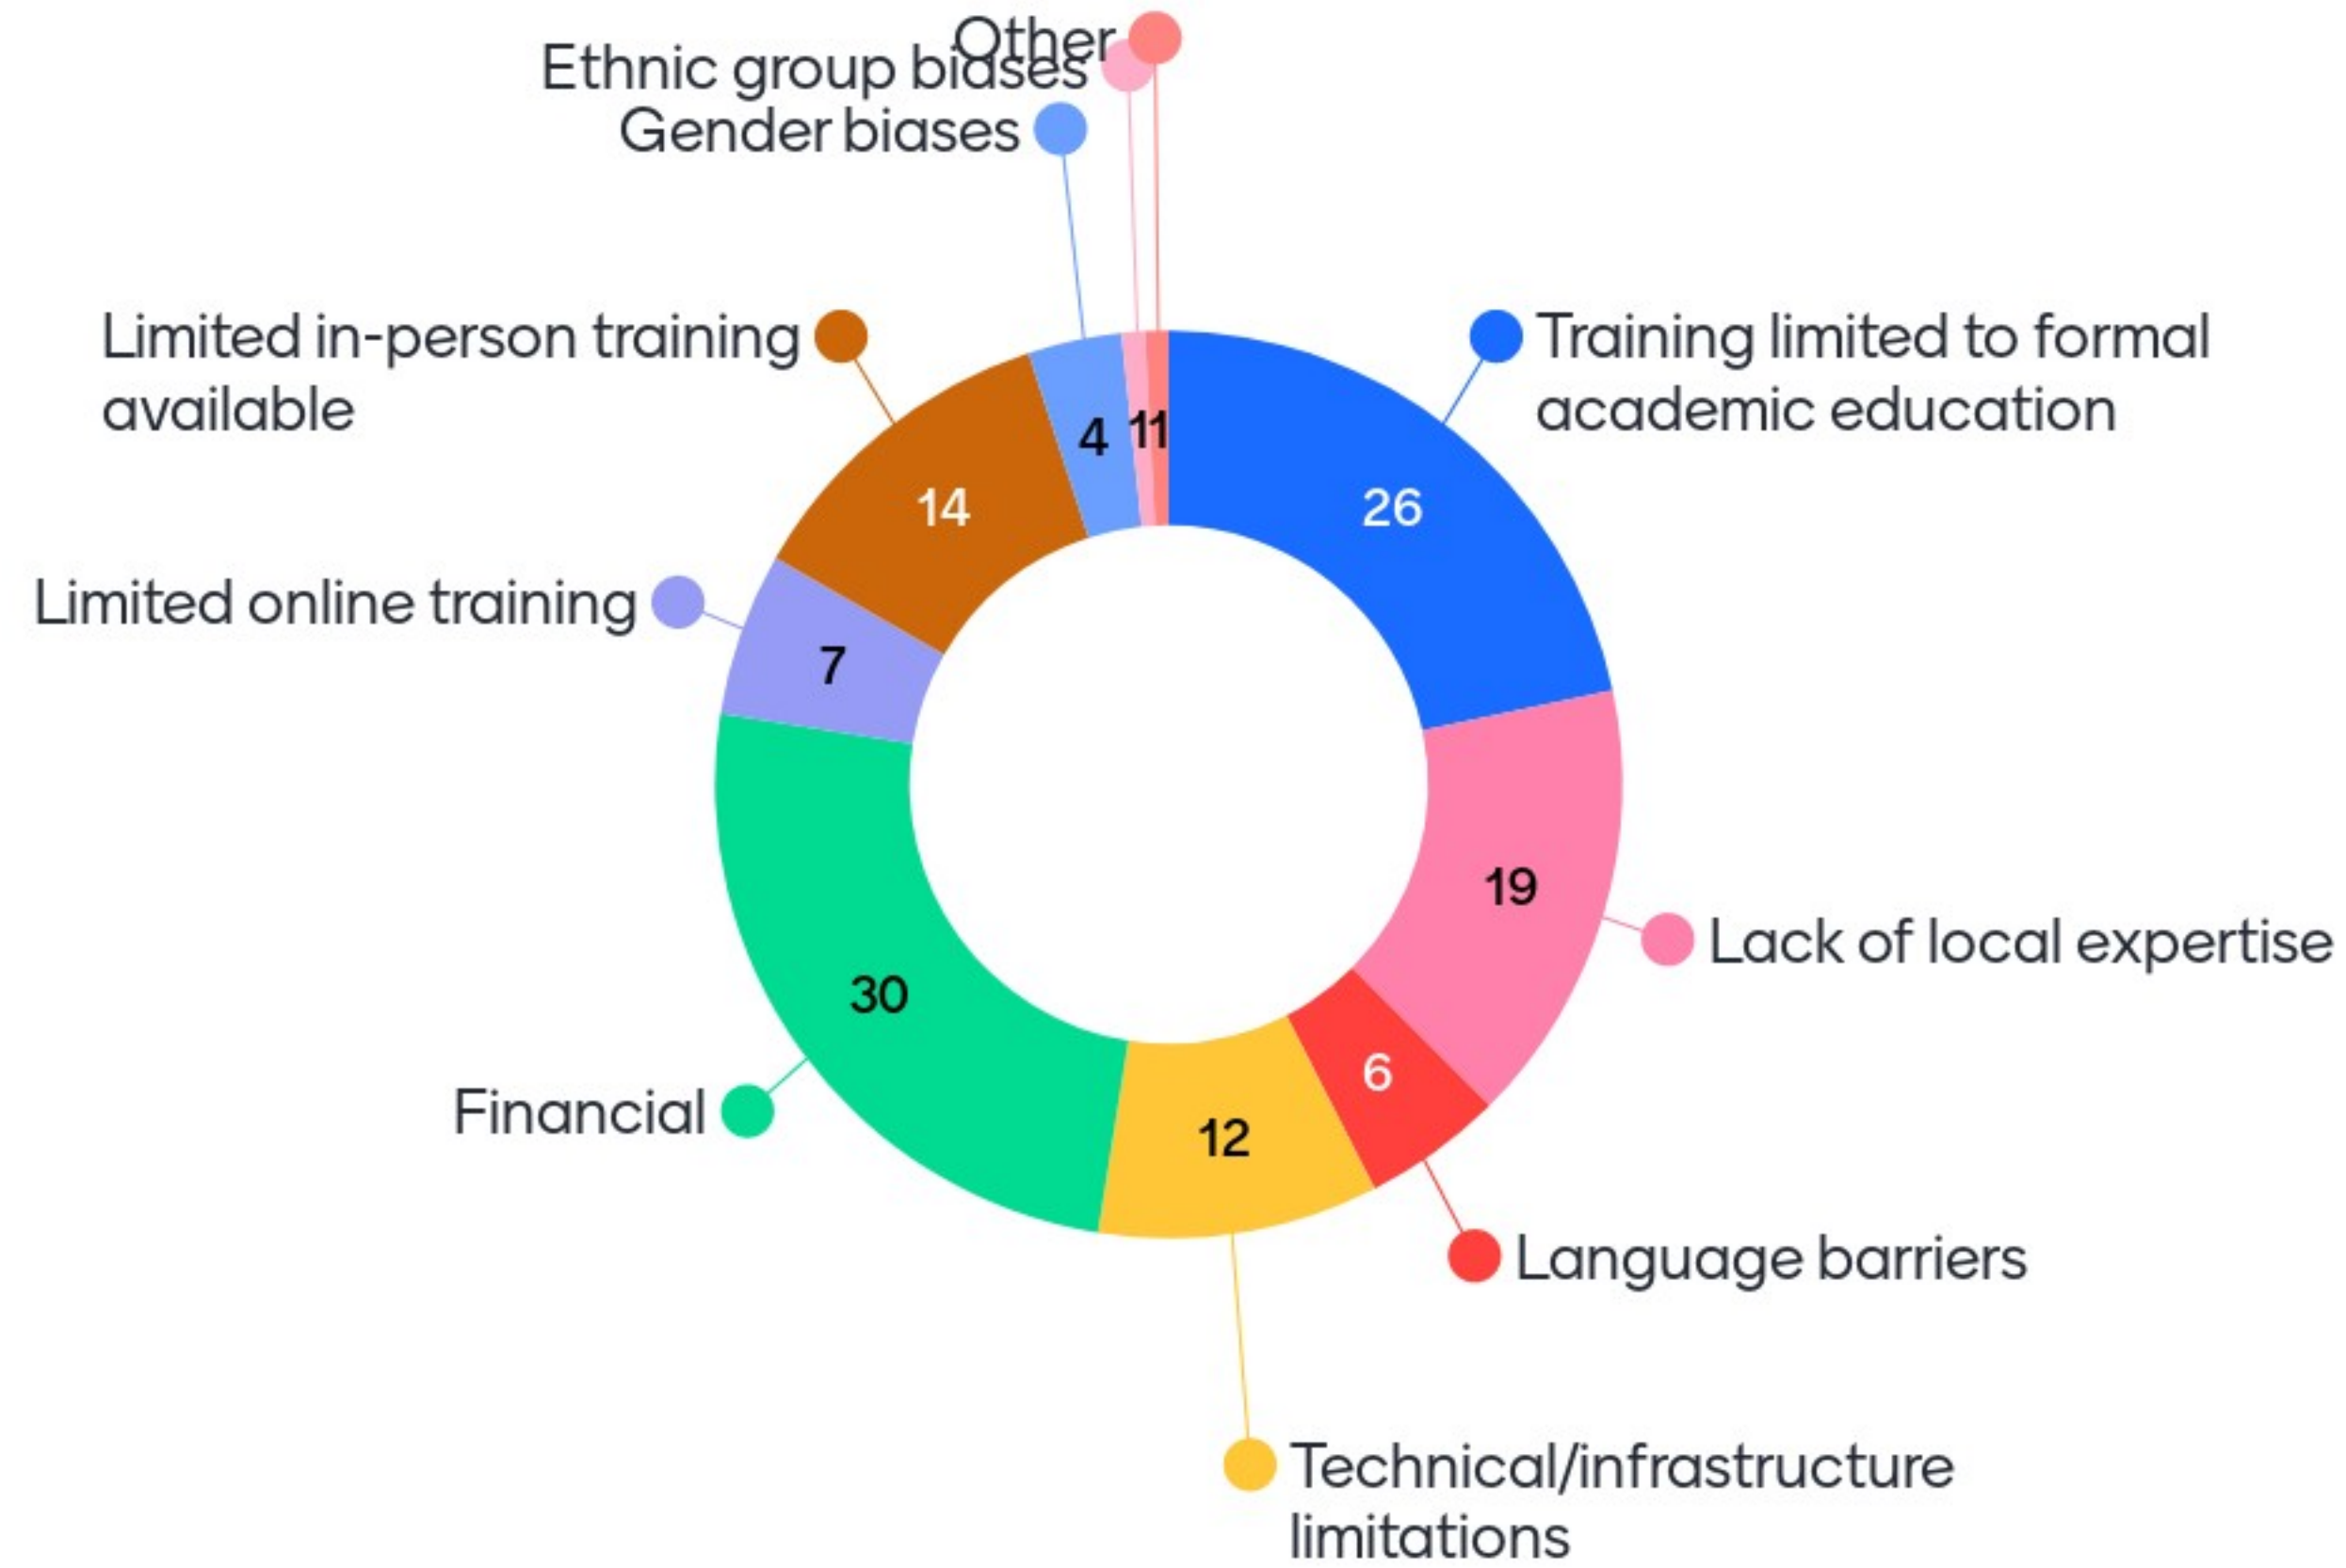

# Which are your preferred communication channels to receive information on climate science training?

# What are the main obstacles to accessing climate science training in your country?

# Share your thoughts (any suggestions, feedback, recommendations...)

33 responses

Go go go global south!!!

Scientists involved in training should be recognized in their career and payed adequately

Summer schools

Regional Summer Schools for training.

Increased interactions between scientists and software engineers could be helpful

Hackathons

Consider adding a 'software engineer' entry to the job categories; I selected 'researcher', as that's the closest, but differentiating may offer better understanding of what this community needs.

Are you also planning to give training on physical concepts?

Inclusive - Latin and south America

# Share your thoughts (any suggestions, feedback, recommendations...)

More training session and conference in the global south

Organizing more climate related trainings

Experts visiting universities for formal training

Language barrier should not be a problem

Mentorship programmes

Need to be recognized

Access to funding and travel expense

Summer schools

Climate juste and climate migration should be definitely leveraged for a proper global south integration and let's start support each others and promote science ethic.

What I didn't see reflected in the barriers are regional research biases (ie. Training on climate models that don't include regional perspective,

Be aware of limitations back at home institutions. Catalytic opportunities that reinforce connectivity and cap dev. Transversal skills not just technical skills.

Training sessions live accessible from any countries, and recording made available afterwards. Speakers should also be inclusive, e.g., experts from developing countries.

Network connections to other social scientists working in the climate space!

Give more possibility to African researchers in Africa with financial support and technology

Really wonderful initiative and great website. Congratulations! I am convinced this will open doors for many people.

Give more possibility for African researchers with financial support and technique

thank you

Are you planning to provide recordings if available?

I think this is an amazing effort and really useful! Maybe some sort of linkage too to funding sources and scholarships too given financial limitations

The blue picture and slogan is cut off on the mobile landing page and might need to be rescaled in some way.

Whether a course involves costs might be a useful filter in the catalogue

It would be great for e.g. school teachers if the Academy would also offer brochures on certain topics or have a catalogue with such written information aimed at a lay audience

Does hybrid mean the training is available to both in-person and virtual attendees, or that the course itself uses both modes?

A way to request for specific trainings would be great
