

## Modelling centre feedback

The Data Request Task Team and Thematic Author Groups welcome any feedback modelling centres can provide on the current Data Request content. If you are able to provide Opportunity and, if you have capacity, variable group feedback, this will be utilised to ensure the CMIP7 Data Request maximises user satisfaction.

Questions in this form are limited to your centre's production intent/internal prioritisation of the Opportunities and Variable Groups. If you would like to provide any more detailed feedback on any Opportunity or Variable Group (e.g. a comment on missing variables), please do so via the comment form: <https://bit.ly/CMIP-comment-opportunities>.

If you would like to provide any specific technical feedback on one or more variables, please do so via the variable comment form: <https://bit.ly/CMIP-variable-comment>.

If you would like to comment on the Data Request Software, please do so via GitHub: [https://github.com/CMIP-Data-Request/CMIP7\\_DReq\\_Software](https://github.com/CMIP-Data-Request/CMIP7_DReq_Software).

Please provide consolidated responses from your centre. This form will not save if you leave the webpage. Therefore, if you would like to complete it in sections (e.g. complete your responses for high priority Opportunities first) that is fine. If you have previously provided feedback and would like your answers to replace any previously provided answers, please indicate this by writing UPDATED after your modelling centre identifier in question two below.

### About your centre

#### Data sharing acknowledgment \*

I acknowledge I have read and agree to the [CMIP IPO Privacy Policy](#). I also understand that our answers will be shared with the Thematic Author Groups to aid harmonisation across the Data Request development process.

If you have any issues/questions, please contact the CMIP IPO at [cmip-ipo@esa.int](mailto:cmip-ipo@esa.int).

#### Modelling centre \*

Please write your modelling centre acronym/identifier below. If you are submitting this feedback for a specific model in your centre, please indicate this as well.

#### Email contact \*

The Task Team/Thematic Author Teams will use this email for any questions relating to your feedback below.

### Opportunity production intent

In the six questions below, please select all the Opportunities which match the production intent in the question. E.g. for the first question, select all the Opportunities which you will definitely aim to produce. We are aware that plans are still evolving in many centres and will evaluate your responses with this in mind.

If you are unsure about your intent for any Opportunity, please do not select it in any of the six questions below.

#### High priority Opportunities

We will definitely aim to produce data to support the following Opportunities.

#### Medium priority Opportunities

We would like to produce the following Opportunities, but this will depend on other factors.

#### Low priority Opportunities

We will only produce the following Opportunities if time/volume allows.

[+ Add record](#)

#### Will not produce these Opportunities

This is because they are not relevant for our model(s).

[+ Add record](#)

#### Will not produce Opportunity

This is because they are impossible with our workflow, e.g. annual means, climatologies.

[+ Add record](#)

#### Will not produce Opportunity

This is because the data request volume is too large.

[+ Add record](#)

### Variable group production intent (optional)

The following variable groups are requested from one or more of the Opportunities you have indicated high/medium/low production intent for in the previous section. The proposers of the variable groups have suggested their own priority levels for different variable groups, but we would like to know your production intent. If you are able, please let us know per variable groups below.

To view the full list of variable groups, and the Opportunities they are requested for, [please see here](#).

Please note, all questions below are optional. The priority definitions are the same for all variable groups.

#### baseline\_monthly variable group production intent

- Yes, high priority (will aim to definitely produce)
- Yes, medium (would like to produce, will depend on other factors)
- Yes, low (will only produce if time/volume allows)
- No (not relevant for our model)
- No (Impossible with our workflow, e.g. annual means, climatologies etc)
- No (Data request volume too large)

#### baseline\_daily variable group production intent

- Yes, high priority (will aim to definitely produce)
- Yes, medium (would like to produce, will depend on other factors)
- Yes, low (will only produce if time/volume allows)
- No (not relevant for our model)
- No (Impossible with our workflow, e.g. annual means, climatologies etc)
- No (Data request volume too large)

#### baseline\_fixed variable group production intent

- Yes, high priority (will aim to definitely produce)
- Yes, medium (would like to produce, will depend on other factors)
- Yes, low (will only produce if time/volume allows)
- No (not relevant for our model)
- No (Impossible with our workflow, e.g. annual means, climatologies etc)
- No (Data request volume too large)

#### baseline\_subdaily variable group production intent

- Yes, high priority (will aim to definitely produce)
- Yes, medium (would like to produce, will depend on other factors)
- Yes, low (will only produce if time/volume allows)
- No (not relevant for our model)
- No (Impossible with our workflow, e.g. annual means, climatologies etc)
- No (Data request volume too large)
